Dear Mr. Trahan,

we confirm your reference as follows:

We already equipped many of our hydraulic and lubrication systems with your EPE filters and we made very good experiences.

Examples for such projects are:

Papierfabrik Köhler Decor, Ettlingen
Papierfabrik August Köhler AG, Kehl
Papierfabrik Haindl UPM Kymmene, Schongau
Papierfabrik Sappi, Ehingen
Papierfabrik Haindl UPM Kymmene, Schwedt
Papierfabrik MD Papier, Plattling
Papierfabrik Palm, Aalen
Papierfabrik Drewsen Spezialpapiere, Lachendorf
Papierfabrik Norske Skog, Duisburg
Papier- und Kartonfabrik Varel, Varel

The quality of your products is at least comparable to Pall. We can therefore recommend your EPE filters in paper mill hydraulic and lubrication applications.

Further more we confirm a successful partnership in dehydration of lubricating oils. Examples are Köhler Decor, Ettlingen and Hermes, Düsseldorf. The previously used dehydration systems from your competitors did not manage to work successful because of the high viscosity and the low temperature of the oil (ISO VG 220, 38 °C). There was no sufficient removal of water.

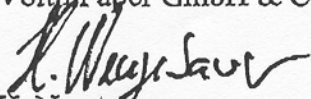

The finally used EPE VacuClean® system worked perfectly in spite of the difficult conditions.
Even the solved water was almost completely removed from the system.
The water content of the oil was reduced from 6% initial water content down to 0,0058% (=58ppm).

We recommend to use your EPE VacuClean® system for dehydration of hydraulic and lubrication oils in paper mill applications.

Yours sincerely,

Voith Paper GmbH & Co. KG
